

InsulCurb18

Data Sheet

General Characteristics of the Insulated Roof Curb, InsulCurb18.

The insulated 18-inch-tall roof curbs are for EPDM, PVC and TPO roofs. The insulation improves energy efficiency and provides both a water and air barrier.

AVP uses Johns Manville's Foil Faced Polyisocyanurate Board Insulation. This provides a smooth surface resistant to absorption. As a result, adding any extra layer of protection. As moisture laden air moves through the roof curb to the vent or exhaust fan, there's no loose insulation to absorb moisture. Instead, the moisture will pass through the insulated roof curb and vent directly outside.

The Johns Manville insulation is double foiled to stop the build up of moisture. Instead, the foil repels water to prevent possible mold from forming.

AVP uses 1" thick board with an R-6 value for the RC-12 to RC-48 models. Fiberglass insulation for 1" is around R-3 value. The ridge board provides double the amount of insulation value available per inch of thickness.

The models RC-3 to RC-10 use a 1/2" Johns Manville's Foil Faced Polyiso Board Insulation. This 1/2" board provides an R-2.7 value.

Polyiso has the highest R-value per inch of any rigid board insulation. This insulation meets both CFC- and HCFC-free specification requirements.

AVP's curb mount flange vent lines are ready to install on the insulated roof curbs.

Product Applications of the Insulated Roof Curb, InsulCurb18.

An insulated roof curb is a component primarily used in construction and architecture to provide thermal insulation and moisture protection in the area where the roof meets the exterior walls of a building. It can be utilized in residential, commercial, industrial, agricultural, storage facilities, and refrigeration and freezing installations. The insulated roof curb can be employed in various environments to provide thermal insulation and moisture protection in the area where the roof meets the exterior walls of the building.

Warranty of the Insulated Roof Curb, InsulCurb18.
