Data Sheet

General Characteristics of the RoofCurbsCaps.

Roof Curb Caps cover the top of the roof curb when there is no vent or fan in place. They keep out precipitation and wildlife from entering the attic. As a result, protecting your home from outside elements. Each Cap is made from durable rust-free aluminum. The top of the cap is solid to shield the opening of the roof curb. They are quick and easy to install. Simply place the cap over the curb and attach the two together using screws. See the specific installation guides for each size.

A Roof Curb is a metal frame that acts as a platform for mounting a roof vent or fan. As a result, this platform will provide additional height allowing for installation in all climate zones.

When a roof vent is not currently on the roof curb, the Cap will protect the opening from outside elements.

Building heavy wooden curbs can cause damage to the roofing membrane. Instead, eliminate the possibility of damage by buying AVP's prefabricated ones.

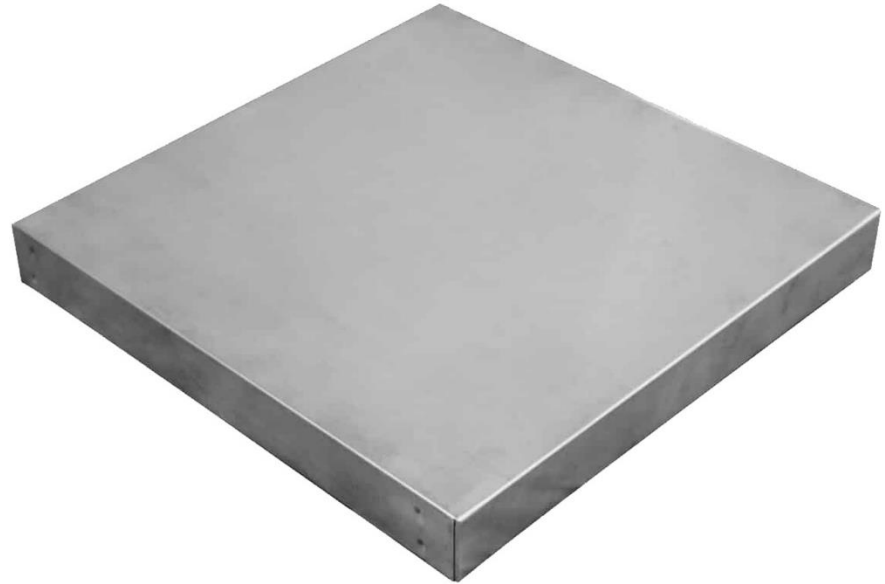

Product Applications of the RoofCurbsCaps.

Roof Curbs, or roof curb caps, are used in a variety of applications in the construction and engineering industry. Some places where they can be used include air conditioning systems, ventilation systems, smoke extraction systems, roof access, etc.

Roof curb caps are versatile components used in a variety of applications to provide support, stability, and safe access on commercial, industrial, and residential roofs.
